PART 2: NEW INTEGRATIONS — EVENT DISCOVERY FEED

Add a live "What's Happening" events feed pulling from Eventbrite, Ticketmaster, and Facebook Events. This gives both students and merchants a reason to return to the site regularly, and gives merchants a way to promote their own events.

> Add this section to: (1) Homepage — between Success Stories and FAQ sections, (2) Dedicated /happening/ page

UI / Design Spec for Events Section

- Card grid layout — 3 columns desktop, 1 column mobile
- Each card shows: Event name, date, location, source badge (Eventbrite / Ticketmaster / Facebook), short description, "Get Tickets" or "RSVP" CTA button
- Filter tabs: All | Food & Drink | Music | Sports | Nightlife | Community | Fundraisers
- Search bar: "Search events near Pepperdine..."

- Location radius filter: Within 5 miles | 10 miles | 25 miles of campus
- Date filter: Today | This Week | This Weekend | This Month
- Section heading: "What's Happening Around Campus"
- Subheading: "Events, deals, and things to do near Pepperdine — updated daily."
- Homepage: show 3 upcoming events with "See All Events" link to /happening/
- Add "Submit Your Event" button for merchants to submit events for review

Integration 1: Eventbrite API

API DOCS

https://www.eventbrite.com/platform/api

ENDPOINT

```
GET /events/search/
```

```

expand = "venue,organizer,ticket_availability"
```

AUTHENTICATION

OAuth 2.0 (Private Token). Dev must create free account at eventbrite.com/platform

FIELDS TO DISPLAY FROM API RESPONSE

- name.text — event title
- start.local — date and time
- venue.name + venue.address — location
- description.text — truncate to 120 characters
- url — link to ticket page
- logo.url — event image

Integration 2: Ticketmaster Discovery API

API DOCS

https://developer.ticketmaster.com/products-and-docs/apis/discovery-api/v2/

ENDPOINT

```
GET /discovery/v2/events.json
```

KEY PARAMETERS

```
city = "Malibu"
stateCode = "CA"
radius = 25, unit = "miles"
sort = "date,asc"
```

AUTHENTICATION

FIELDS TO DISPLAY FROM API RESPONSE

- name — event title
- dates.start.localDate + localTime
- _embedded.venues[0].name + address
- _embedded.attractions[0].name — artist or performer name
- url — ticket link
- images[0].url — event image

Integration 3: Facebook Events (Meta Graph API)

> Facebook's public events API is restricted. Start with Option B and upgrade later.

Option A (Easiest)

Use Facebook oEmbed or manually curate Facebook event links for partner merchants and display as cards.

Option B — Recommended Starting Point

Ask each merchant joining The Movement to share their Facebook Event links. Team manually adds these to the /happening/ CMS and displays them as cards with a "Facebook Event" badge.

Option C — Future Upgrade

Use the Meta Graph API with a Page Access Token to pull events from specific Facebook Pages (Pepperdine-area business pages we follow). Requires Facebook App approval. Upgrade to this as the merchant network grows.

Technical Notes for Dev Team

1. Build a server-side proxy/middleware (Node.js or PHP) to call the APIs. Do NOT expose API keys in frontend JavaScript.
2. Cache API responses for 30-60 minutes to avoid rate limits. Use Redis or simple file-based cache.
3. Deduplicate events that appear across multiple sources — match by event name + date + location.
4. Add "Powered by Eventbrite" and Ticketmaster attribution badges per their API Terms of Service.
5. Fallback: if APIs return no results, show static message "Check back soon — events coming!" instead of empty state.
6. Mobile responsiveness is critical — students will primarily view this on phones.
7. Add "Submit Your Event" button so merchants can submit events for admin review before they go live.
